

Logging using SLF4J

Exercise 1: Logging Error Messages and Warning Levels

LoggingExample.java

```
package com.example; import org.slf4j.Logger; import org.slf4j.LoggerFactory; public class
LoggingExample { private static final Logger logger =
LoggerFactory.getLogger(LoggingExample.class); public static void main(String[] args) { int
loginAttempts = 4; boolean serverConnected = false; if(loginAttempts > 3) { logger.warn("Too many
login attempts detected"); } if(!serverConnected) { logger.error("Database connection failed"); }
} }
```

Logger warnings output:

Console Log Output

```
260724|22:30:15.123|[main] | WARN |com.example.LoggingExample | Too many login attempts detected
260724|22:30:15.125|[main] |ERROR |com.example.LoggingExample | Database connection failed
```

Exercise 2: Parameterized Logging

ParameterizedLogging.java

```
package com.example; import org.slf4j.Logger; import org.slf4j.LoggerFactory; public class  
ParameterizedLogging { private static final Logger logger =  
LoggerFactory.getLogger(ParameterizedLogging.class); public static void main(String[] args) {  
String student = "Sasank"; int marks = 100; String result = "DOMINATED"; logger.info("Student {}  
scored {} marks and result is {}", student, marks, result); } }
```

Parameterized logging output:

Console Log Output

```
260724|22:30:15.130|[main] | INFO |com.example.ParameterizedLogging | Student Sasank scored 100 marks and result is DOMINAT
```
